Subject: inspection

Danielle,

I conducted the inspection of our instrument today and received three errors, i am aware of why they all occurred but wanted you to know.

m/a range exceeded... i used too much mouth alcohol.

RFI on the .08 because i was fidgiting with my radio and turned it on.

RFI on the dry gas because someone walked in to the room with their radio on to ask if I wanted coffee... I did not.

redid all the tests and the instrument was fine and passed. All of these are human error and there was nothing wrong with the instrument.

Danielle,

While conducting my inspection I turned my radio on during the interferent detect and got an RFI. I know what the cause is, redid the test and everything was fine. Just giving you a heads up. I also placed a note in the comments section.

Larry

Subject: Inspection issues...

Hi Danielle,

I had two issues with my inspections that were my fault.

One was that i didnt use enough MA on the MA test and it read out of range. i redid it and it worked fine.

Second was on the dry gas. I forgot to hook up the hose until the first test was almost over... I redid it and there were no issues.

Everything is fine and I just wanted you to be aware of them when you saw them

Thank You,

Larry
