## Guide for Use

This document encompasses the data elements the Florida Department of Law Enforcement (FDLE) needs to support 943.6871(10), F.S. This statute, known as Criminal Justice Data Transparency (CJDT) created the uniform arrest affidavit so each state, county, and municipal law enforcement agency can facilitate complete, accurate, and timely collection and reporting of data from each criminal offense arrest.

This document is focused on the data elements required for inclusion in the uniform arrest affidavit. This requirement is based on statute and workgroup input as well as related elements needed to increase uniformity and completeness of the data. Each element has a definition and proposed data format type.

The dictionary will be expanded to elaborate on data format types and the XPath. Business rules will also be added.

### Format Types

Each field contains a format type. The following list contains the types of formats that may be found in this document.

XML Data Type	Format Type	Description/Example
xs:string	Alphabetic	Only characters A through Z unless otherwise noted
	Alphanumeric	Only number and characters A through Z unless otherwise noted
	Code Value	A list of values – only values listed will be valid
xs:decimal	Decimal	A number that allows decimals; example: 999.99
xs:integer	Number	Only numbers 0123456789
xs:boolean	True or False	Two values only; example: Yes or No or a check box
xs:date	YYYY-MM-DD	Only Date; example: 2002-05-30
xs:dateTime	YYYY-MM-DDThh:mm:ss	Data and time are submitted together; example: 2000-08-23T14:31:00Z
xs:time	hh:mm:ss	Only Time; example: 09:30:10

Some code values in the XML may include values not listed in this document. Only values that pertain to the arrest affidavit are recorded in this document.

### XPath

FDLE's technical specification uses NIEM XML standards. NIEM XML stands for National Information Exchange Model eXtensible Markup Language. It is a partnership of the U.S. Department of Justice, Department of Homeland Security, and Department of Health and Human Services and it standardizes content to accurately compare or consolidate data. NIEM is an XML-based information exchange framework.

Within this Data Dictionary FDLE has included the XML XPath for each field with the business definitions of the field. XPath stands for XML Path Language. XPath uses "path like" syntax to identify and navigate through elements and attributes in an XML document. The XPath will be used by technical implementers and it is documented in the IEPD. The IEPD can be found on CJNet at <http://www.flcjn.net/CJIS-Resources/Resources/FDLEIEPD.aspx>

## Person Elements

There are multiple person roles associated with an arrest affidavit. For each role, the specific data elements that can be part of the arrest affidavit are different. The person roles, or types, currently identified are Defendants (adult or juvenile), Codefendant, Witness, Victim, Parent (of juvenile defendant) and Emergency Contact. Officer information may also be captured in this area as well.

The person level summary elements are displayed in table format to show the relationship of the element to a person type. For example, Date of Birth is a required element for adult and juvenile Defendants. It is optional for all other person roles. Age is Not Applicable for Defendants (if needed it can be calculated from the required date of birth). Age is optional for Codefendant, Witness and Victim roles.

Elements that are unique to a single person type are not in the table. These will be summarized in another section of this document. Each person element in the table, are defined and values are provided on the following pages.
